CARE FOR WORK ENVIRONMENTS[®]

POWDER DAM

Powdered Gel Absorbent
Gel absorbant en poudre

EASY-TO-USE

Simply sprinkle Powder Dam over a spill and let it do the rest. A pleasant apple fragrance helps to eliminate foul odors associated with spills. Powder Dam quickly congeals all types of liquid spills on hard surfaces and carpeting, for a fast, neat clean-up.

VERSATILE

Just remove the congealed mass with a broom or wet vac. Powder Dam eliminates the need to deal with messy, potentially harmful liquids. Powder Dam can be used effectively on blood, vomit, urine, body fluids, acid-based spills, alkaline-based spills, polymer and other water-based spills along with small gasoline and diesel fuel spills.

ECONOMICAL

One container of Powder Dam absorbs up to 4 gallons of liquid. It actually picks up to 70 times its weight in fluids.

DIRECTIONS

1. Care should be taken when dealing with potentially harmful liquids. Prior to use put on gloves, dust mask and protective clothing.
2. Sprinkle Powder Dam over the spill until the area is completely covered.
3. Allow Powder Dam to congeal the spill.
4. After the liquid has congealed, use an appropriate instrument (such as a broom or wet vac) to remove it. Follow all Federal, State and Local regulations pertaining to the disposal of materials.

5. After the congealed mess has been removed, clean and disinfect the area with a disinfectant such as NDC
6. Carefully remove and dispose of gloves, face mask and protective clothing following all Federal, State and Local regulations.
7. Wash hands thoroughly. If biological waste was involved, use a hand cleaner such as State Hands On® Defense

Note: When using on diesel fuel or gasoline spills, cover the entire spill with Powder Dam and add water to activate. Handle with care and avoid contact with flames; material may be flammable due to characteristics of liquid absorbed

TECHNICAL DATA

APPEARANCE: white, free-flowing powder

ODOR: apple scent

DENSITY: 2.0 - 2.5 pounds/cubic feet

SOLUBILITY: insoluble in water and organic solvent

ABSORPTION REQUIREMENT: absorbs water based spills. A small amount of water should be added to solvent based spills in order to activate Powder Dam.

FLASHPOINT: >200 degrees F
