

## DISINFECTING HARD FLOORS

Hard floors may be the most soiled surface in your facility. Guests and staff are continuously entering and exiting, which only increases the spread of bacteria and viruses, including COVID-19. Without properly disinfecting your hard floors, additional surfaces may become contaminated when unwanted organisms are trapped on the bottom of your shoes.

Before disinfecting, State recommends using a neutral floor cleaner to ensure your hard floors are free from visible soils. Additionally, any cleaning solutions should be mixed fresh daily to avoid contamination or expiration.

Personal protective equipment (PPE) must be worn while disinfecting your hard floors. This includes gloves and safety glasses.

The following State products can be used to disinfect your hard floors.

### Quick Defense™ NDC\* (US only, excluding California)

- PPE: Gloves, safety glasses.
- Dilute 1 ounce per gallon of water.
- Apply solution with a mop, cloth, sponge, hand pump trigger sprayer or low pressure coarse sprayer so as to wet all surfaces thoroughly.
- Allow to remain wet for 5 minutes.
- Remove excess liquid.
- Do not breathe spray mist.

### NDC™

- PPE: Gloves, safety glasses.
- Dilute 2 ounces per gallon of water.
- Apply solution with a mop, cloth, sponge, hand pump trigger sprayer or low pressure coarse sprayer so as to wet all surfaces thoroughly.
- Allow to remain wet for 10 minutes.
