

DISINFECTING AIR CONDITIONER COILS AND DRIP PANS

The spread of COVID-19 across the globe has everyone working hard to disinfect buildings and public spaces. As the World Health Organization continues to investigate how the disease is spread through the air, many organizations are taking extra precautions by also disinfecting air conditioner coils and drip pans to avoid additional contamination.

By nature, air conditioner coils and drip pans collect dust, debris and are breeding grounds for bacteria and viruses. Regular disinfection is recommended to ensure the safety of building occupants. Additional disinfection methods with products carrying a human coronavirus claim may be used to clean air conditioner coils and drip pans.

Personal protective equipment (PPE) must be worn while fogging any space. This includes gloves, safety glasses and a respirator.

According to the EPA Emerging Pathogen Policy, State has disinfecting solutions for air condition coils and drip pans to combat the spread of COVID-19.

Ecolution® Disinfectant (US only, excluding California)

- PPE: Gloves, safety glasses.
- Dilute 2 ounces per gallon of water.
- Apply solution with a trigger sprayer or other mechanical sprayer devices.
- Treated surfaces must remain wet for 10 minutes.
- Let air dry.

F-362™ No Rinse (California and Canada only)

- PPE: Gloves, safety glasses.
- Dilute 2 ounces per gallon of water.
- Apply solution with a trigger sprayer or other mechanical sprayer devices.
- Treated surfaces must remain wet for 10 minutes.
- Let air dry.
